Allucinogeni

A hallucinogen is a psychoactive agent that often or ordinarily causes hallucinations, perceptual anomalies, and other substantial subjective changes in thought, emotion, and consciousness that are not typically experienced to such degrees with other drug classifications. The common classifications for hallucinogens are psychedelics, dissociatives and deliriants.

Hallucinogen - Wikipedia

Hallucinogens are a diverse group of drugs that cause an alteration in perception, thought, or mood. A rather heterogeneous group, these compounds have different chemical structures, different mechanisms of action, and different adverse effects.

Hallucinogen Use: Background, Pathophysiology, Epidemiology

Psychoactive drugs like hallucinogens are known for altering your perception of reality. While most are not addictive, all pose serious health risks.
