Fluid Mechanics For Civil Engineers

Fluid mechanics is the branch of classical physics and mathematics concerned with the response of matter that continuously deforms (flows) when

subjected to a shear stress. The subject can be divided into fluid statics - the study of fluids at rest, and fluid dynamics - the study of the effect of forces on fluid motion.

Consider, for example, the synergy of fluid principles in air pollution control, water and wastewater treatment, groundwater management and control, and the construction of dams and bridges. As a result, it is vital that civil engineers develop a basic foundation in the mechanics of fluids before investigating
