Then the set of optimal solutions of the problem is $n = k + 0.5k$, so by Prop. 3.1.4, it will suffice to show that for each asymptotic direction of $\{S_k\}$, all corresponding asymptotic sequences are retractive. Let d be an asymptotic direction and let $\{x_k\}$ be a corresponding asymptotic sequence. Similar to the proof of Prop. 3.1.5, we have $d^T Q d > 0$.

Nonlinear Programming, 3rd Edition, 2016. Convex Optimization Algorithms, 2015. Convex Optimization Theory, 2009. This series of complementary textbooks cover all aspects of continuous optimization, and its connections with discrete optimization via duality. The two convex optimization books deal primarily with convex, possibly nondifferentiable, problems and rely on convex analysis.

The solution is given by $x = \begin{pmatrix} 0 \\ 3 \end{pmatrix}$, with $z = 21$. 4. (a) If x_1 and x_2 denote the number of grams of grass and number of grams of forb, respectively, consumed by the vole on a given day, then the total foraging time is given by $z = 45.55x_1 + 21.87x_2$. Since the coefficients in this sum have units of minutes per gram, the units of z are minutes.
