by the nonferrous metal, iron and steel, glass, construction material, chemical and petrochemical industries as well as in power plants and refuse incinerators. Consequently, refractory engineering is charged with a major task: control the fire and protect the supporting structure of the furnaces and plants against high temperatures.

Engineering
Refractory ...

A refractory material or refractory is a material that is resistant to decomposition by heat, pressure, or chemical attack, and retains strength and form at high temperatures.

Refractories are inorganic, nonmetallic, porous, and heterogeneous. They are typically composed of oxides or non oxides like carbides, nitrides etc. of the following
